To whom it Concerns,

As noted in previous correspondence our response to the Regulation 10 information request was submitted on the 18th October 2017, almost seven months ago and since then the Agency has requested three deferrals of the period within which a decision must be made. The purpose of the licence review is to allow us to process the IBA to recover the metal fraction and reduce the quantity being disposed to landfill. This is a relatively straightforward process and readily amenable to an assessment against BAT and the identification of the appropriate control measures to prevent pollution. To date there have only been two third party submissions, one from the HSE in June 2017 and a second in August 2017 from an individual representing the residents of Rosnaree Estate. As the Agency's last request for further information was in September 2017 it can only be assumed it now has all of the information required to make a decision on the application. Therefore we do not consent to such a deferral.

Best Regards
