

SANITARY EFFLUENT COMPLIANCE

The existing office, canteen and staff welfare facilities (toilet and hand-washing facilities) at Kilsaran Concrete's existing concrete production facility at Halverstown are shared with staff working at the adjoining permitted waste recovery facility.

These facilities will continue to be available for the use of current (and any additional / future) staff assigned to the waste recovery facility. Sewage from these established facilities is treated at an existing septic tank. Effluent from the tank is discharged to ground via a percolation area located beyond the north-western corner of the application site. The septic tank and related infrastructure is, and will continue to be, regularly serviced / maintained. No new or upgraded wastewater treatment facilities are required or proposed to service the proposed waste recovery facility.
