# 1 INTRODUCTION

## 1.1 PROJECT BACKGROUND

In 2015, RPS was appointed by Cosgrave Developments to carry out an Environmental Risk Assessment (ERA) at the historic landfills at Fassaroe, Co. Wicklow. A detailed site investigation was conducted between November 2015 and March 2016 as part of the ERA and included an initial round of baseline sampling of waste leachate, groundwater and springs and surface waters at the site (RPS Report (2016); ref. no. MDR1206Rp0004 F01).

The current surface water and groundwater monitoring round, provides additional quality data for the Fassaroe Site to allow comparison to appropriate Environmental Quality Standards (EQS).

## 1.2 OBJECTIVES

The objectives of the current round of water quality monitoring at the Fassaroe Site are as follows:

- To obtain water quality from surface and groundwater bodies during low flow (dry) period.
- To assess the variability of water quality results.

## 1.3 SITE BACKGROUND

A detailed description of the Site Conceptual Model (CSM) is given in ERA Report (2016), and is summarised below:

The Fassaroe site consists of five historic landfills (Site 1, Site 2, Site 3A, Site 3B and Site 3C), most of which are in relatively close proximity to the County Brook River. All five waste bodies (sources) are surrounded by a thick sequence of unsaturated sand and gravels which represent glaciofluvial and glaciolacustrine sediments that make up the Enniskerry gravel aquifer body, classed as locally important gravel aquifer.

Groundwater boreholes were installed into the gravel aquifer, both up and down gradient, where possible, at all five waste sites. Groundwater flow in the gravel aquifer was shown to be to the north and northeast towards the river, based on water levels taken on the 29<sup>th</sup> of March 2016. Groundwater discharges emerge as springs and seepages along the northern boundary of the gravel aquifer in the river valley and feed a small strip of alkaline fen and tufa deposits within the Ballyman Glen Special Area of Conservation (SAC) [Site code: 000713].

The majority of the waste is underlain by unsaturated subsoil at Site 2 and Site 3a, however the most northerly parts of the waste body, closest to the river, appear to intercept the water table. In Site 3C the base of the waste appears to intercept the top of the water table across the majority of the site.

The underlying bedrock consists of Ordovician Metasediments of the Maulin Bedrock Formation characteristic of dark blue-grey slate, phyllite & schist, classified as a locally important, moderately productive bedrock aquifer in local zones (LI). The depth to bedrock was not confirmed during the site investigation drilling programme of up to 35 metres.

## 1.4 SCOPE OF WORKS/METHODOLOGY

### 1.4.1 Surface Water & Spring Sampling

On the 24th of August (2016) surface water sampling was completed at 10 locations including five springs and five targeted locations along the County Brook River (Fassaroe Stream). The surface water monitoring locations are presented in Figure 1. The position of the springs relative to the waste bodies is identified in Table 1.1.

**Table 1.1 – Spring Monitoring Locations**

Sample ID	Location
SP1	60m down gradient of Site 2
SP2	85m down gradient of Site 1
SP3	140m down gradient of Site 3C
SP4	25m down gradient of Site 3A
SP5	60m down gradient of Site 3A

All surface water grab samples were obtained by placing the dedicated sampling bottles directly into the surface water body. Samples were obtained from areas where river level and flow was observed to ensure samples were representative. The sample inlet was placed below the surface flow while care was taken not to disturb the base/bed of the surface water body. Indicative field parameters of electrical conductivity, pH and temperature were taken for each sampling location.

### 1.4.2 Groundwater Sampling

Between the 30<sup>th</sup> of August and the 1<sup>st</sup> of September 2016, groundwater samples were taken from a total of seven groundwater monitoring boreholes (including one gas borehole G20), targeting both up-gradient and down-gradient locations of the landfills where possible. The position of groundwater monitoring boreholes relative to the waste bodies is identified in Table 1.2.

**Table 1.2 - Groundwater Monitoring Boreholes Sampled**

Site ID	BH ID	Relative Location	Other Groundwater boreholes (not sampled)
Site 1	BH05	Up gradient	none
Site 2	G20 (gas well)	Up gradient	Up gradient: BH03 (dry); BH04(dry); BH11(dry); BH13(dry);
	BH01	Down/Side gradient	
Site 3A	BH07, BH09, BH10 (d),	Up/Side Gradient	none
Site 3B	none		Down gradient: BH8 (dry)
Site 3C	BH06	Up-gradient	none

The boreholes which did not intercept groundwater include BH03, BH04, BH11 and BH13 (all of which are surrounding Site 2). BH8 at Site 3B did not intercept groundwater in the current round, albeit sufficient water for sampling was present in the previous monitoring round in March 2016.

Groundwater samples were obtained following purging a minimum of three well volumes prior to sample collection. To minimise cross contamination between sampling locations dedicated inertial tubing was used to collect each sample.

Indicative field parameters of electrical conductivity, pH and temperature were recorded at each sampling location.

### 1.4.3 Leachate Sampling

A total of 11 leachate samples were collected from the five sites between the 30<sup>th</sup> of August and the 1<sup>st</sup> of September 2016). The remaining leachate boreholes did not intercept any water or contained insufficient sample volumes. A summary of all leachate monitoring boreholes is presented in Table 1.3.

**Table 1.3 - Leachate Monitoring Boreholes Sampled**

Site ID	Sampled boreholes	Other boreholes (not sampled)
Site 1	LG11	LG12 (dry), LG13 (dry)
Site 2	LG03, LG07, LG09, LG10	LG01 (dry), LG02 (dry), LG04 (dry), LG05 (dry), LG06 (<40cm of leachate), LG08 (dry)
Site 3A	LG15, MW4, LG19	LG20 (dry), MW3
Site 3B	LG17	LG16 (<15cm of leachate), LG21 (<20cm of leachate)
Site 3C	LG14, MW2	LG18 (dry)

The leachate samples taken were collected by RPS staff in laboratory supplied sample containers and shipped to Chemtest Ltd. (UKAS Accredited), Depot Road, Newmarket, CB8 0AL, UK. To minimise cross contamination between sampling locations dedicated inertial tubing was used to collect each leachate sample.

Historic leachate monitoring wells are in existence at Sites 3A and Site 3C. For the current sampling round, leachate samples were collected from MW2 and MW4 for analysis. Other historic leachate monitoring boreholes are in existence across Sites 1 and 2, however borehole logs were not available therefore the integrity of existing monitoring infrastructure could not be established and were not utilised during the monitoring regime.

### 1.4.4 Laboratory Analysis

The surface water, spring water, leachate and groundwater samples were collected by RPS staff in laboratory supplied sample containers and shipped in cooler boxes including ice packs on the same day to Chemtest Ltd. (UKAS Accredited), Depot Road, Newmarket, CB8 0AL, UK. Confirmation of receipt was received the following day that all three batches of samples arrived in good condition.

All water and leachate samples were scheduled for testing of the following suite of parameters:

- Metals (including Al, As, Ba, B, Cd, Ca, Cr, Cu, Fe, Pb, Mn, Hg, Ni, K, Na, V, Zn)
- Biochemical Oxygen Demand
- Chemical Oxygen Demand
- pH
- Electrical Conductivity
- Alkalinity as CaCO<sub>3</sub>
- Ammoniacal Nitrogen as N
- Chloride as Cl
- Nitrite as N
- Nitrogen, Total Oxidised as N
- Phosphate, Ortho as P
- Sulphate as SO<sub>4</sub>
- Total Dissolved Solids
- Total Suspended Solids
- Total Organic Carbon
- Cyanide
- Fluoride
- Phenols
- Extractable Hydrocarbons
- Polycyclic aromatic Hydrocarbons
- Volatile Organic Compounds
- Semi-Volatile      Organic      Compound

The leachate and groundwater samples were also scheduled for dissolved gases including methane, oxygen and carbon dioxide.

For inspection purposes only:  
Consent of copyright owner required for any other use.

## 2 RESULTS

### 2.1 SURFACE WATER & SPRINGS

#### 2.1.1 Field Parameters

The field parameters for spring and surface waters are summarised in Table 2.1 below.

**Table 2.1 – Surface water and Spring Field Parameters**

Date	BH-ID	pH (-)	Temp (°C)	EC ( $\mu\text{S}/\text{cm}$ )	Visual
24/08/2016	SP1	7.67	14.8	1,379	Ochre, red discolouration & hydrocarbon sheen
24/08/2016	SP2	8.51	14.1	660	Calcite deposits present
24/08/2016	SP3	7.77	15.2	607	Calcite deposits present
24/08/2016	SP4	7.49	15.6	976	Ochre deposits present
24/08/2016	SP5	7.95	15.2	646	Calcite deposits present
24/08/2016	SW1	8.28	12.9	547	Clear
24/08/2016	SW2	8.52	12.5	539	Clear
24/08/2016	SW3	8.61	12.4	558	Clear
24/08/2016	SW4	8.47	12.1	550	Clear
24/08/2016	SW5	8.18	11.8	548	Clear

Spring locations SP2, SP3 and SP5 show accumulations of calcite (tufa) deposits. Spring locations SP1 and SP4, both show evidence of ochre staining, with lower pH readings than the calcite depositing springs. Spring location SP1 also showed evidence of hydrocarbon contamination and showed the highest electrical conductivity reading of all the spring locations.

Surface waters do not indicate any visual or olfactory evidence of contamination.

#### 2.1.2 Laboratory Analysis

Surface water samples results were compared to Environmental Quality Standards (EQS) for freshwater bodies from the Surface Water Regulations (SI 327 of 2012 and SI 386 of 2015). These standards include a list of EQS for specific pollutants and for general physio-chemical conditions for good and high water body status. As such, these standards are considered to be the most appropriate generic assessment criteria for assessing the risk to surface water courses. The laboratory results for springs and surface waters are presented in Appendix A, and a summary of exceedances above EQS are summarised in Table 2.2.

**Table 2.2 – Surface water & Spring EQS Exceedances**

Type	Monitoring Location	Exceedances above EQS (specific pollutants)	Exceedance above general conditions for good status	Hydrocarbon & VOC detections
River	SW1		Ammoniacal Nitrogen	-
River	SW2		Ammoniacal Nitrogen	-
River	SW3		-	Chloromethane
River	SW4		Ammoniacal Nitrogen	Chloromethane
River	SW5	Mercury	Ammoniacal Nitrogen	Chloromethane
Spring	SP1		Ammoniacal Nitrogen	-
Spring	SP2		Ammoniacal Nitrogen	Chloromethane
Spring	SP3		Ammoniacal Nitrogen	Chloromethane
Spring	SP4	Nickel	Ammoniacal Nitrogen	Chloromethane
Spring	SP5	Zinc	Ammoniacal Nitrogen	Chloromethane

The results highlight exceedances at almost all locations of ammoniacal nitrogen, with exception of SW3, and chloromethane with the exception of SW1, SW2 and SP1. Isolated exceedances of nickel in SP4 and zinc in SP5 are also observed.

## 2.2 GROUNDWATER

### 2.2.1 Field Parameters

Field parameters for groundwater monitoring locations are summarised in Table 2.3. The purged and sampled groundwater at all monitoring locations contained significant amounts of fine sediment (silt) and as a result all samples were filtered on-site.

**Table 2.3 – Groundwater Field Parameters**

Date	BH-ID	Water level (mbgl)	pH (-)	Temp (°C)	EC (µS/cm)	Visual
30/08/2016	BH9	7.78	7.06	13.8	740	Silty brown
30/08/2016	BH8	dry	-	-	-	-
30/08/2016	BH7	14.91	7.43	16.5	709	Brown, very silty
30/08/2016	BH10	9.33	7.35	13.6	727	Brown, very silty
31/08/2016	BH6	6.45	6.88	14.5	867	Silty brown
31/08/2016	BH5	20.23	7.12	13.3	972	Slight brown colour, very silty
31/08/2016	G20	15.20	7.76	14	523	Brown, very silty
01/09/2016	BH1	15.94	6.68	12.1	927	Brown, turbid, very silty

## 2.2.2 Laboratory Analysis

Groundwater concentrations have been compared to the Interim Guideline Values (IGV) for Groundwater as presented in EPA interim report “Towards Setting Guideline Values for the Protection of Groundwater in Ireland” (2003) and the Groundwater Regulations Threshold Values (GTV) (S.I. 9 of 2010). Groundwater quality results for all sites are presented in Appendix A, and exceedances above GTVs for all sites are summarised in Table 2.4.

**Table 2.4 – Groundwater GTV and IGV Exceedances**

Site	Monitoring location	Exceedances above GTV ( <i>and IGV*</i> )	Hydrocarbon and VOC Detections
Site 1	BH5	Ammoniacal Nitrogen, Chloride ( <i>Boron, Iron</i> )	-
Site 2	G20	Ammoniacal Nitrogen, ( <i>Boron, Iron, Chloride</i> )	-
Site 2	BH1	Ammoniacal Nitrogen, Boron ( <i>Iron</i> )	-
Site 3A	BH7	Ammoniacal Nitrogen	-
Site 3A	BH9	Ammoniacal Nitrogen ( <i>Iron</i> )	-
Site 3A	BH10	Ammoniacal Nitrogen ( <i>Iron</i> )	-
Site 3C	BH6	Ammoniacal Nitrogen ( <i>Iron</i> )	Chrysene

\*Parameters listed in *italics* exceed only the IGV.

The results highlight that ammoniacal nitrogen exceeds the GTV at all groundwater monitoring locations. Exceedances above relevant GTV are also noted for Chloride in BH5 (up gradient of Site 1) and Boron in BH1 (down gradient of Site 2).

Exceedances above IGV's are observed for iron at almost all groundwater monitoring locations, with the exception of BH7, for boron in BH5 (up gradient of Site 1) and G20 (up gradient of Site 2) and also for chloride in G20.

As summarised in Table 2.5 dissolved methane gas remained below detection limit of <0.050mg/l at all groundwater locations. Dissolved carbon dioxide gas ranged from 2.0 to 44mg/l across the sites.

**Table 2.5 – Dissolved Gases in groundwater samples in mg/l**

Dissolved Gas	Site 1	Site 2		Site 3A			Site 3C
	BH5	G20	BH1	BH7	BH9	BH10	BH6
Oxygen	11	9.5	14	8.7	8.4	9.9	9.3
CO2	44	9	30	2	3.3	1.7	25
Ethane	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050
Ethene	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050
Methane	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050	< 0.050

## 2.3 LEACHATE

### 2.3.1 Field Parameters

The field parameters for the leachate samples are summarised in Table 2.6.

The leachate ranged from dark grey/ black to brown in colour and measurements of electrical conductivity were above the maximum threshold ( $>3999\mu\text{S}/\text{cm}$ ) of the field probe instrument for almost all sampling locations.

**Table 2.6 – Leachate Field Parameters**

Date	BH-ID	Water level (mbgl)	pH (-)	Temp (°C)	EC ( $\mu\text{S}/\text{cm}$ )	Visual
30/08/2016	LG17	3.67	7.23	16.2	>3,999	dark grey cloudy, strong foul odour
30/08/2016	LG15	6.94	6.82	19	3,467	black colour, strong foul odour
30/08/2016	LG19	~14.50	7.20	14	>3,999	slight black colour, strong foul odour
31/08/2016	LG14	~11.23	7.34	17	>3,999	dark grey, very turbid, strong foul odour
31/08/2016	LG11	12.12	7.01	15.7	2,473	dark grey/black, turbid, slight foul odour
01/09/2016	LG01	dry		-	-	-
01/09/2016	LG09	7.05	7.19	14.2	>3,999	dark brown, speckles of hydrocarbon sheen, strong foul odour
01/09/2016	LG10	~13	7.17	15	>3,999	dark brown, speckles of hydrocarbon sheen, strong foul odour
01/09/2016	LG07	11.63	7.18	15	>3,999	brown/grey, speckles of hydrocarbon sheen, strong foul odour
01/09/2016	LG04	dry	-	-	-	-
01/09/2016	LG05	dry	-	-	-	-
01/09/2016	LG03	17.57	6.99	15.3	>3,999	

### 2.3.2 Laboratory Analysis

Field measurements of electrical conductivity, temperature and pH for leachate samples taken at each of the sites are used as indicators of generic leachate properties.

Waste leachate concentrations obtained from chemical laboratory analysis have been compared to the Interim Guideline Values (IGV) for Groundwater as presented in EPA interim report “Towards Setting Guideline Values for the Protection of Groundwater in Ireland” 2002. The leachate results are also compared to the groundwater threshold values (GTV) in the Groundwater Regulations (SI 9 of 2010) and as such provide a conservative assessment of risk.

The tabulated results are presented in Appendix A and a summary of GTV exceedances for all sites is given in Table 2.7.

**Table 2.7 – Leachate GTV Exceedances and IGV Exceedances**

Site	Monitoring location	Exceedances above GTV (and IGV)	Hydrocarbon & VOC detections
Site 1	LG11	Boron, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, Sulphate, (Barium, Boron, Calcium, Iron, Manganese, Potassium, Nitrite, Total Dissolved Solids, Total Phenols)	-
Site 2	LG03	Arsenic, Boron, Mercury, Nickel, Sodium, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, (Barium, Boron, Iron, Manganese, Potassium, Total Dissolved Solids, Total Petroleum Hydrocarbons)	-
Site 2	LG07	Arsenic, Boron, Nickel, Sodium, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, (Barium, Boron, Iron, Manganese, Potassium, Phosphate, Total Dissolved Solids)	-
Site 2	LG09	Arsenic, Boron, Nickel, Sodium, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, (Barium, Boron, Iron, Manganese, Potassium, Phosphate, Total Dissolved Solids)	-
Site 2	LG10	Arsenic, Boron, Mercury, Nickel, Sodium, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, (Barium, Boron, Iron, Manganese, Potassium, Phosphate, Total Dissolved Solids, Total Petroleum Hydrocarbons)	-
Site 3A	LG15	Arsenic, Boron, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, Benzene, (Barium, Boron, Calcium, Iron, Manganese, Potassium, Total Dissolved Solids, Total Phenols, Total Petroleum Hydrocarbons, Naphthalene, PAH, Toluene, m & p-Xylene, Methyl Tert-Butyl Ether)	Vinyl Chloride, cis 1,2-Dichloroethene, Benzene, Toluene, Ethylbenzene, m & p-Xylene, o-Xylene, 1,3,5-Trimethylbenzene, 1,2,4-Trimethylbenzene, 4-Isopropyltoluene
Site 3A	MW4	Arsenic, Boron, Nickel, Sodium, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, (Barium, Boron, Iron, Manganese, Potassium, Phosphate, Total Dissolved Solids, Total Phenols, Total Petroleum Hydrocarbons, Naphthalene, PAH)	Toluene, m & p-Xylene, o-Xylene
Site 3A	LG19	Arsenic, Boron, Nickel, Sodium, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, Benzene, (Barium, Boron, Iron, Manganese, Potassium, Phosphate, Total Dissolved Solids, Total Phenols, Total Petroleum Hydrocarbons, Chlorobenzene, m & p-Xylene)	Benzene, Toluene, Chlorobenzene, Ethylbenzene, m & p-Xylene, o-Xylene, Isopropylbenzene, 1,3,5-Trimethylbenzene, 1,2,4-Trimethylbenzene, 4-Isopropyltoluene
Site 3B	LG17	Arsenic, Boron, Nickel, Sodium, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, Benzene, (Barium, Boron, Iron, Manganese, Potassium, Phosphate, Total Dissolved Solids, Total Phenols, Total Petroleum Hydrocarbons, Toluene, m & p-Xylene)	Vinyl Chloride, Benzene, Toluene, Ethylbenzene, m & p-Xylene, o-Xylene, 1,3,5-Trimethylbenzene, 1,2,4-Trimethylbenzene, 4-Isopropyltoluene

Site	Monitoring location	Exceedances above GTV (and IGV)	Hydrocarbon & VOC detections
Site 3C	LG14	Arsenic, Boron, Nickel, Sodium, Electrical Conductivity, Ammoniacal Nitrogen, Chloride, (Boron, Iron, Manganese, Potassium, Phosphate, Total Dissolved Solids, Total Phenols, Total Petroleum Hydrocarbons, Naphthalene)	Nitrobenzene, 2-Nitrophenol, 2,4-Dimethylphenol, Naphthalene, 4-Chloro-3-Methylphenol, Diethyl Phthalate, Toluene, Ethylbenzene, m & p-Xylene, o-Xylene, 1,2,4-Trimethylbenzene, 4-Isopropyltoluene
Site 3C	MW2	Arsenic, Boron, Electrical Conductivity, (Barium, Boron, Iron, Manganese, Potassium, Chloride, Naphthalene)	1,4-Dichlorobenzene, Toluene, Naphthalene, 2-Methylnaphthalene

**Table 2.8** summarises the dissolved gases in the leachate samples. Dissolved methane gas was detected in all leachate samples, ranging from 0.41 to 12mg/l, with the highest value observed in LG17 (Site 3B). Carbon dioxide gas ranges from 47 to 160mg/l across all sites, with the highest value observed in MW2 (Site 3C).

**Table 2.8 – Dissolved Gases in Leachate samples in mg/l**

Dissolved	Site 1		Site 2			Site 3A			Site 3B		Site 3C	
	LG11	LG03	LG07	LG09	LG10	LG15	MW4	LG19	LG17	LG14	MW2	
Oxygen	3.1	9.9	7.8	8.5	9.9	4.1	1.6	3.0	2.7	0.8	4.6	
CO <sub>2</sub>	100	85	88	110	78	73	80	76	47	71	160

## 4 DISCUSSION

### 4.1 SITE 1

The waste at Site 1 is largely comprised of construction and demolition waste, albeit the presence of domestic waste has also been documented from the site investigation. The waste leachate highlighted exceedances above groundwater threshold and guideline values of 15 water quality parameters, as summarised in Table 2.7.

Groundwater results for up-gradient BH05 show that there are a small number of exceedances above GTVs and/or IGVs for ammoniacal nitrogen, chloride, boron and iron concentrations. Due to slope instability towards the County Brook, there are no directly down gradient of the landfill at Site 1.

Dissolved methane gas concentrations were not detected in the groundwater sample at Site 1. Dissolved carbon dioxide concentrations were 100mg/l in the leachate sample and 44mg/l in the up-gradient groundwater monitoring borehole BH5.

Water quality results from spring SP2, which emerges approximately 85m downgradient of Site 1 in close proximity to the County Brook River, shows an exceedance above Surface Water EQS for ammoniacal nitrogen. There are no other exceedances above surface water EQS noted for tested water quality parameters at SP2.

### 4.2 SITE 2

Waste encountered at Site 2, the largest of the landfill sites, is comprised of mixed municipal waste. Leachate results from the four leachate monitoring boreholes (LG03, LG07, LG09 and LG10) highlighted exceedances above groundwater threshold and guideline values between 13 to 21 water quality parameters.

There are two groundwater monitoring boreholes at Site 2, an up-gradient borehole G20 and down-gradient borehole BH01. Up-gradient borehole G20 highlights one exceedance above GTV for ammoniacal nitrogen and above IGVs for boron, iron and chloride.

The downgradient borehole BH01 highlights an exceedance above GTV for ammoniacal nitrogen and above IGVs for iron, both parameters showing higher concentrations than in the up-gradient groundwater, indicating the waste body at Site 2 has impacted the groundwater quality downgradient.

Dissolved methane gas was not detected in up-gradient or downgradient groundwater, despite elevated concentrations in leachate samples ranging from 0.41 to 5.9mg/l at Site 2. Concentrations of dissolved carbon dioxide were higher in the downgradient borehole BH1 than in up-gradient monitoring borehole G20.

Spring location SP1 is located 60 metres down gradient of Site 2 in close proximity to the County Brook River. SP1 shows evidence of ochre staining and hydrocarbon sheen on the water surface and its quality results highlights an exceedance above surface water EQS for ammoniacal nitrogen

biochemical oxygen demand. The results indicate the waste body has impacted the spring water quality at Site 2.

### 4.3 SITE 3A

Waste encountered at Site 3A is comprised of mixed municipal waste and leachate results from three leachate monitoring boreholes (LG15, MW4 and LG19) highlight exceedances above groundwater threshold and guideline values for at least 13 water quality parameters including arsenic and hydrocarbons and total phenols.

There are three groundwater monitoring boreholes, including two locations up-gradient (BH7 and BH9) and one borehole located side/ downgradient (BH10) of the waste body. Water quality results from the up-gradient boreholes highlight exceedances above the GTV for ammoniacal nitrogen and BH9 also exceeds the IGV for iron. These exceedances may possibly relate to the waste body at Site 3B, which is located up-gradient of these groundwater monitoring boreholes.

The results for the side/ downgradient groundwater monitoring borehole BH10 shows the highest concentration of ammoniacal nitrogen at Site 3A, exceeding the GTV and also exceeds the IGVs for iron, manganese and potassium, signifying that the waste body has impacted the groundwater quality at Site 3A.

Dissolved methane gas was not detected in up-gradient or downgradient groundwater, despite elevated concentrations in leachate samples ranging from 1.8 to 6.9mg/l at Site 3A. Concentrations of dissolved carbon dioxide in groundwater range from 1.7 to 3.3mg/l were highest at BH9 and are likely related to the up-gradient waste body at Site 3B.

Results for the two sampled spring locations SP4 (25m downgradient of Site 3A) and SP5 (60m downgradient of Site 3A) show exceedances above surface water EQS for ammoniacal nitrogen. Additional exceedances above surface water EQS include nickel at SP4 and zinc at SP5. The ochre staining observed at SP4 also corresponds with the highest concentrations of iron (0.39mg/l) and manganese (7.4mg/l). There are currently no surface water EQS for iron and manganese. The results highlight that the downgradient spring water quality has been impacted by the waste body at Site 3A.

### 4.4 SITE 3B

Waste encountered at Site 3B is comprised of mixed municipal waste and leachate results from monitoring borehole LG17 indicates exceedances above groundwater threshold and guideline values for 17 water quality parameters including arsenic, chromium, iron and hydrocarbons and total phenols.

The groundwater monitoring borehole BH8 was dry on the day of sampling and therefore there are no groundwater quality results for Site 3B. Previous results have indicated the exceedance of a number of heavy metals in BH8, however the metal concentrations were based on total concentrations as opposed to dissolved concentrations.

There are no springs immediately down gradient of Site 3B.

## 4.5 SITE 3C

Waste encountered at Site 3C is comprised of mixed municipal waste and leachate results from LG14 and MW2 indicates exceedances above groundwater threshold and guideline values for nine water quality parameters including arsenic, and total phenols and total hydrocarbons in MW2.

Water quality results for groundwater monitoring borehole BH6 shows exceedances above groundwater threshold and guideline values for boron, iron, potassium and ammoniacal nitrogen. BH6 is located up-gradient but very close to the waste body. The elevated concentrations in the up-gradient groundwater may relate to a perched leachate head at the up-gradient perimeter of the waste body at the site, possibly causing localised mounding of the water table leading to the plume dispersing from the site. Alternatively, the groundwater quality may be influenced from up-gradient waste body at Site 3B.

Due to slope instability towards the County Brook River, there are no directly downgradient groundwater boreholes of the landfill at Site 3C.

Dissolved methane gas was not detected in up-gradient groundwater at BH6. Concentrations of carbon dioxide in groundwater at BH6 (25mg/l) were lower than concentrations in waste leachate (71 to 160mg/l) at Site 3C.

Quality results for spring SP3 located 140m downgradient of Site 3C, shows an exceedance above the surface water EQS for ammoniacal nitrogen, but is similar to up gradient groundwater concentrations. There are no other exceedances above surface water EQS noted for tested water quality parameters at SP3.

## 4.6 SURFACE WATERS

Surface water quality exceedances above relevant EQS correspond primarily to ammoniacal nitrogen for all sampling locations. The highest ammoniacal nitrogen concentration is observed at sampling location SW5, located upstream of all the sites.

Previous quality results from March (2016) also detected the presence of extractable hydrocarbons (EH C6-C40, C24-C40) at surface water monitoring locations SW3, SW4 and SW5. Hydrocarbons were not detected in the current round, however low concentrations of chloromethane were detected at these locations, which was not detected previously.

Concentrations of metals including zinc, manganese, boron and iron show generally increasing trend downstream, however there are currently no corresponding surface water EQS for these parameters.

The surface water quality results demonstrate the landfill sites are likely to be affecting water quality within the County Brook River, although the significance of this effect is mitigated by the dilution capacity within the main river itself.

## 5 CONCLUSIONS

Groundwater and surface water sampling was completed successfully at the Fassaroe Historical Landfill site and along the County Brook River in September 2016. Samples were collected from seven groundwater boreholes, 11 leachate boreholes, five springs and five surface water monitoring locations.

Leachate results from each site show exceedances above groundwater guidelines values for nine to 17 quality parameters, including heavy metals, ammonia and hydrocarbons.

Groundwater samples downgradient of the waste bodies confirm elevated levels of ammoniacal nitrogen and iron at all sites and manganese at Site 3C. In comparison to the up-gradient groundwater results, the downgradient groundwater results (at Sites 2 and Site 3A for which they are available) indicate that the waste body has impacted the groundwater quality.

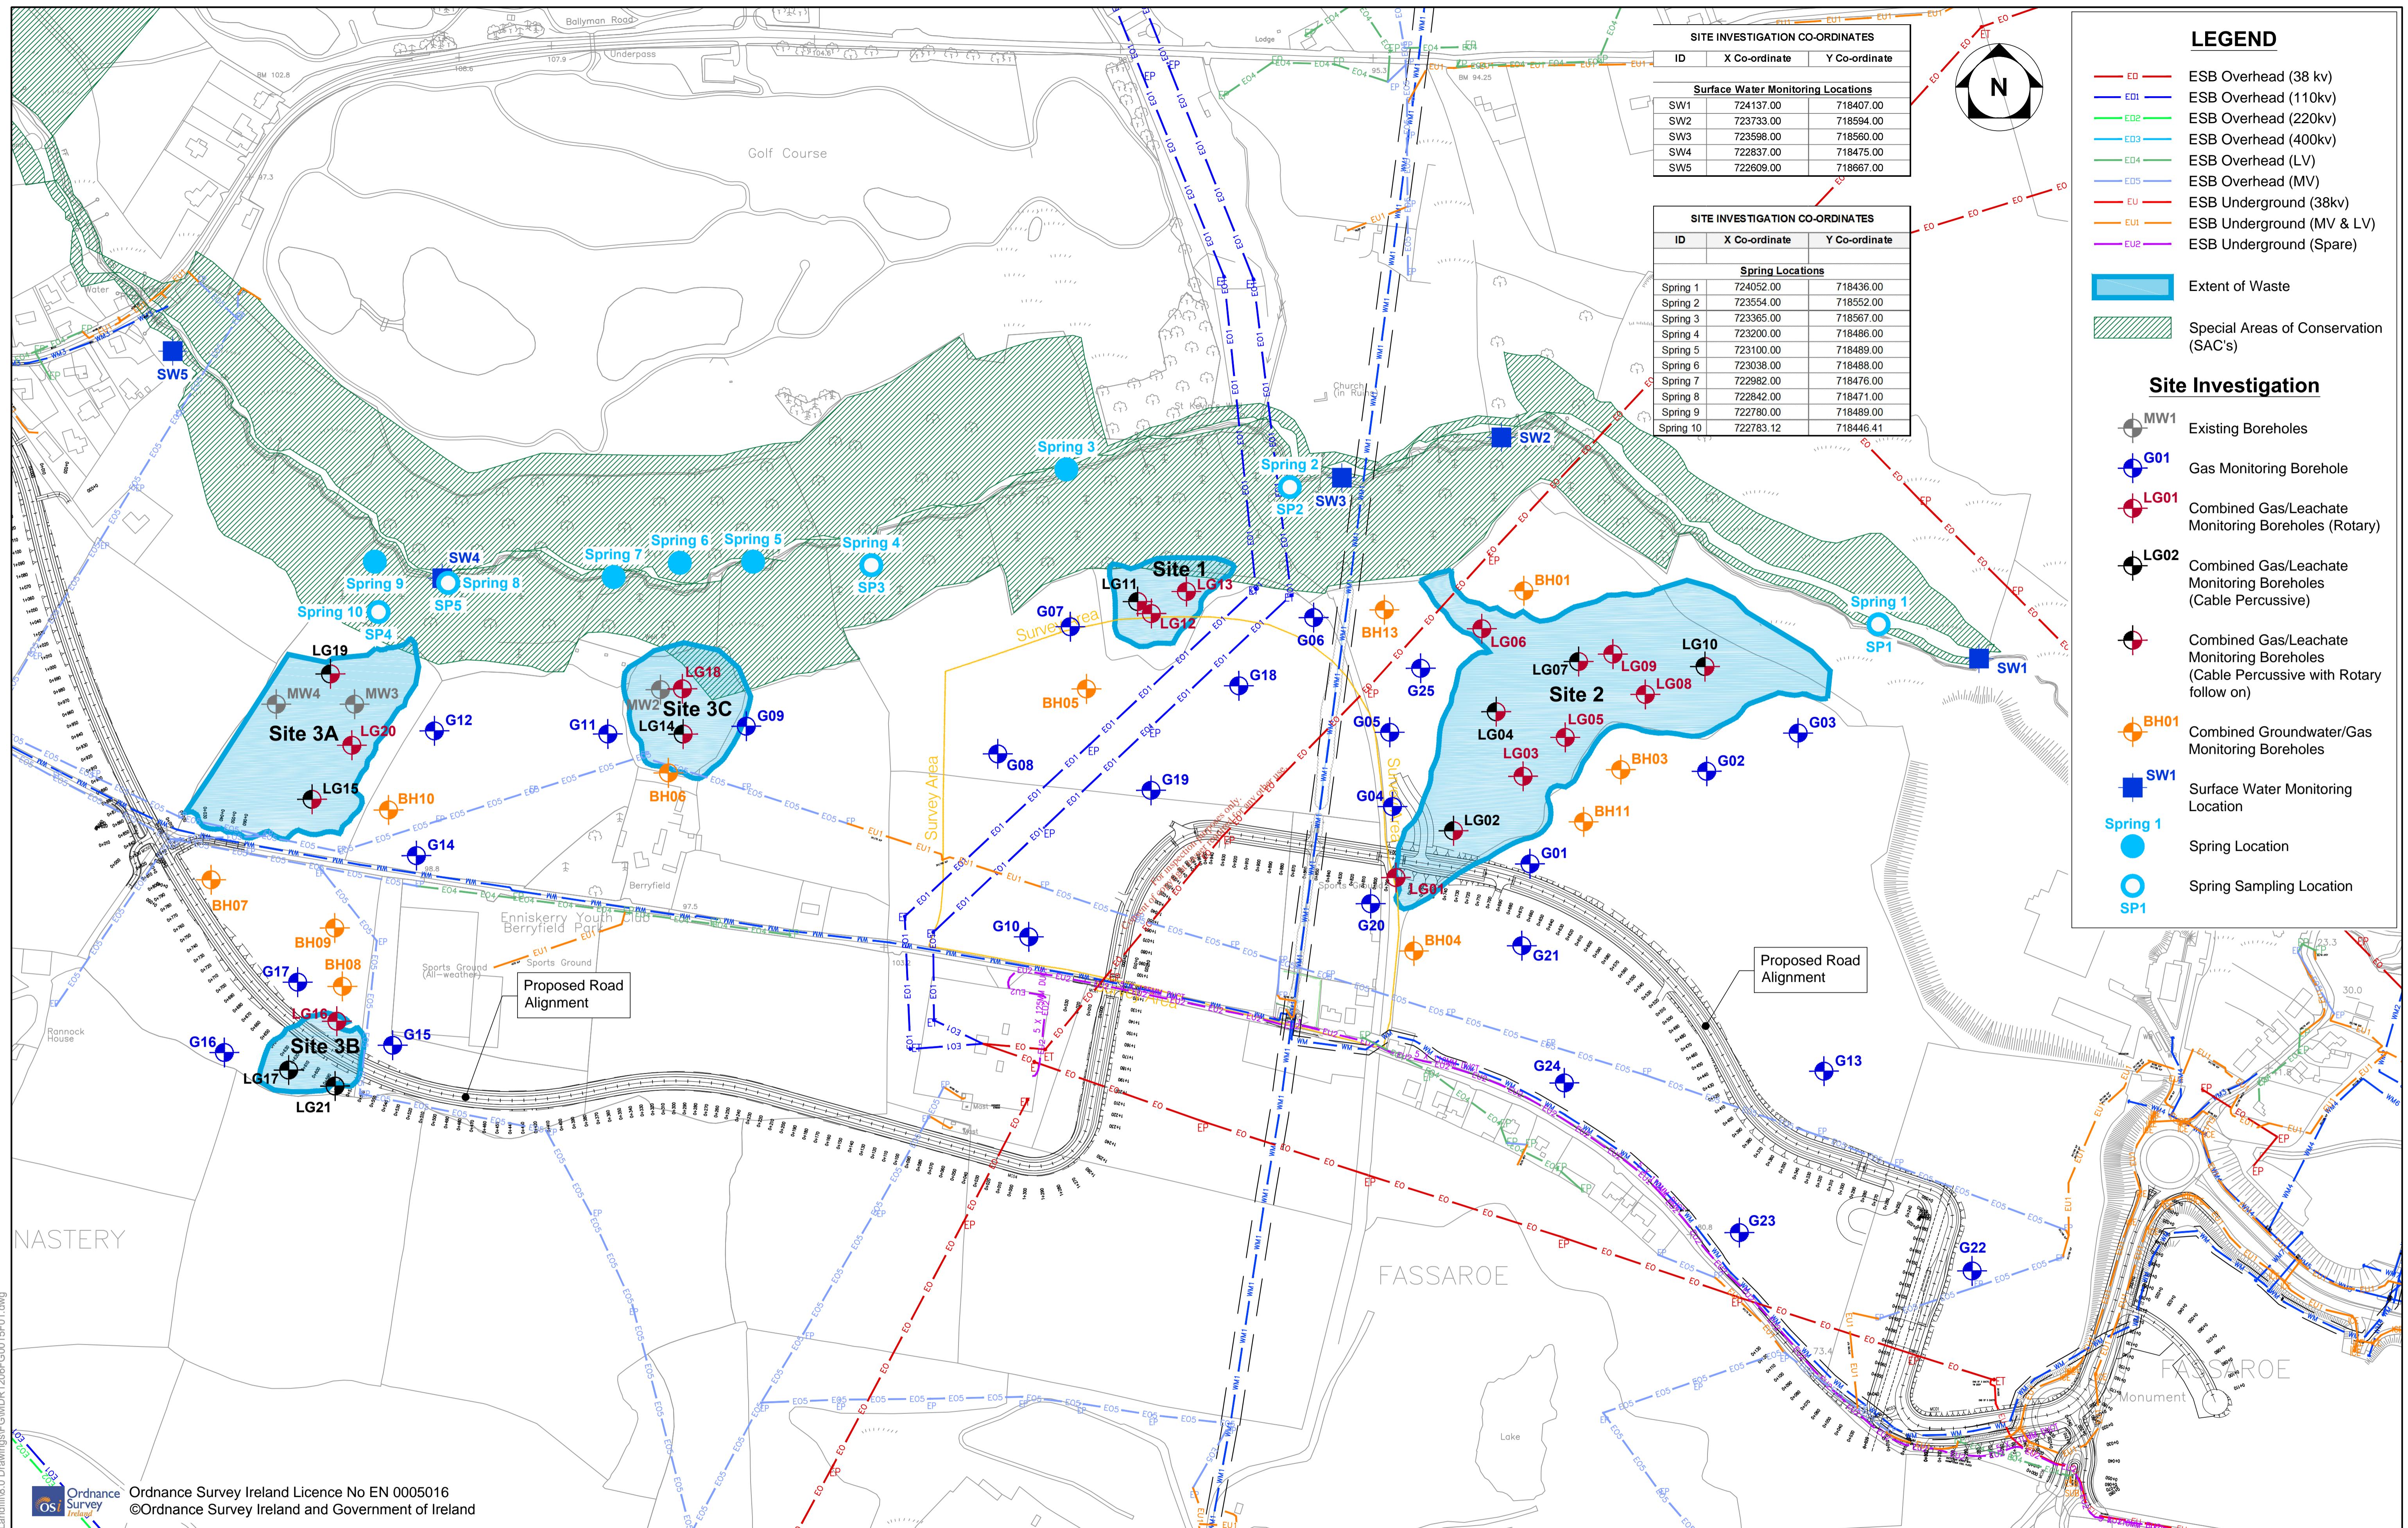

Furthermore, quality results of SP1, SP4 and SP5 downgradient of Sites 2 and 3A also indicate that the waste bodies at these have impacted spring water quality at these sites.

The surface water quality results demonstrate the landfill sites are likely to be affecting water quality within the County Brook River, although the significance of this effect is mitigated by the dilution capacity within the main river itself.

Further bi-annually quality monitoring of leachate, spring and surface waters and groundwater is recommended using the current suite of parameters.

## 6 RECOMMENDATIONS

Further bi-annually quality monitoring of leachate, spring and surface waters and groundwater is recommended using the current suite of parameters.

## Deviations

In accordance with UKAS Policy on Deviating Samples TPS 63. Chemtest have a procedure to ensure 'upon receipt of each sample a competent laboratory shall assess whether the sample is suitable with regard to the requested test(s)'. This policy and the respective holding times applied, can be supplied upon request. The reason a sample is declared as deviating is detailed below. Where applicable the analysis remains UKAS/MCERTs accredited but the results may be compromised.

Sample ID:	Sample Ref:	Sample ID:	Sampled Date:	Deviation Code(s):	Containers Received:
342238		SW1	24-Aug-2016	C	Plastic Bottle 1000ml
342239		SW2	24-Aug-2016	C	Coloured Winchester 1000ml

## Report Information

### **Key**

---

U	UKAS accredited
M	MCERTS and UKAS accredited
N	Unaccredited
S	This analysis has been subcontracted to a UKAS accredited laboratory that is accredited for this analysis
SN	This analysis has been subcontracted to a UKAS accredited laboratory that is not accredited for this analysis
T	This analysis has been subcontracted to an unaccredited laboratory
I/S	Insufficient Sample
U/S	Unsuitable Sample
N/E	not evaluated
<	"less than"
>	"greater than"

Comments or interpretations are beyond the scope of UKAS accreditation

The results relate only to the items tested

Uncertainty of measurement for the determinands tested are available upon request

None of the results in this report have been recovery corrected

All results are expressed on a dry weight basis

The following tests were analysed on samples as received and the results subsequently corrected to a dry weight basis TPH, BTEX, VOCs, SVOCs, PCBs, Phenols

For all other tests the samples were dried at < 37°C prior to analysis.

All Asbestos testing is performed at our Coventry laboratory.

Issue numbers are sequential starting with 1 all subsequent reports are incremented by 1

Confidential - For inspection purposes only.  
Copyright owner reserves all rights.

---

### **Sample Deviation Codes**

- A - Date of sampling not supplied
- B - Sample age exceeds stability time (sampling to extraction)
- C - Sample not received in appropriate containers
- D - Broken Container

---

### **Sample Retention and Disposal**

All soil samples will be retained for a period of 45 days from the date of receipt

All water samples will be retained for 14 days from the date of receipt

Charges may apply to extended sample storage

If you require extended retention of samples, please email your requirements to:

[customerservices@chemtest.co.uk](mailto:customerservices@chemtest.co.uk)

## Report Information

### **Key**

- 
- U UKAS accredited
  - M MCERTS and UKAS accredited
  - N Unaccredited
  - S This analysis has been subcontracted to a UKAS accredited laboratory that is accredited for this analysis
  - SN This analysis has been subcontracted to a UKAS accredited laboratory that is not accredited for this analysis
  - T This analysis has been subcontracted to an unaccredited laboratory
  - I/S Insufficient Sample
  - U/S Unsuitable Sample
  - N/E not evaluated
  - < "less than"
  - > "greater than"

Comments or interpretations are beyond the scope of UKAS accreditation

The results relate only to the items tested

Uncertainty of measurement for the determinands tested are available upon request

None of the results in this report have been recovery corrected

All results are expressed on a dry weight basis

The following tests were analysed on samples as received and the results subsequently corrected to a dry weight basis TPH, BTEX, VOCs, SVOCs, PCBs, Phenols

For all other tests the samples were dried at < 37°C prior to analysis

All Asbestos testing is performed at our Coventry laboratory

Issue numbers are sequential starting with 1 all subsequent reports are incremented by 1

---

### **Sample Deviation Codes**

- A - Date of sampling not supplied
- B - Sample age exceeds stability time (sampling to extraction)
- C - Sample not received in appropriate containers
- D - Broken Container

---

### **Sample Retention and Disposal**

All soil samples will be retained for a period of 45 days from the date of receipt

All water samples will be retained for 14 days from the date of receipt

Charges may apply to extended sample storage

If you require extended retention of samples, please email your requirements to:

## Final Report

---

**Report No.:** 16-21054-1

**Initial Date of Issue:** 09-Sep-2016

**Client** RPS

**Client Address:** West Pier Business Campus  
Dun Laoghaire  
Co. Dublin  
Ireland

**Contact(s):** Janka Nitsche

**Project** MDR1206 - Fasseroe

**Quotation No.:** Q16-07130 For inspection purposes only.  
Consent of copyright owner required for any other use. **Date Received:** 02-Sep-2016

**Order No.:** For inspection purposes only.  
Consent of copyright owner required for any other use. **Date Instructed:** 02-Sep-2016

**No. of Samples:** 5

**Turnaround (Wkdays):** 5 For inspection purposes only.  
Consent of copyright owner required for any other use. **Results Due:** 08-Sep-2016

**Date Approved:** 09-Sep-2016

**Approved By:**

**Details:** Robert Monk, Technical Development  
Chemist

## Deviations

In accordance with UKAS Policy on Deviating Samples TPS 63. Chemtest have a procedure to ensure 'upon receipt of each sample a competent laboratory shall assess whether the sample is suitable with regard to the requested test(s)'. This policy and the respective holding times applied, can be supplied upon request. The reason a sample is declared as deviating is detailed below. Where applicable the analysis remains UKAS/MCERTs accredited but the results may be compromised.

Sample ID:	Sample Ref:	Sample ID:	Sampled Date:	Deviation Code(s):	Containers Received:
346279	G.Water	BH1	01-Sep-2016	C	Amber Glass 60ml
346279	G.Water	BH1	01-Sep-2016	C	Coloured Winchester 1000ml
346279	G.Water	BH1	01-Sep-2016	C	Plastic Bottle 1000ml

For inspection purposes only.

## Report Information

### **Key**

---

U	UKAS accredited
M	MCERTS and UKAS accredited
N	Unaccredited
S	This analysis has been subcontracted to a UKAS accredited laboratory that is accredited for this analysis
SN	This analysis has been subcontracted to a UKAS accredited laboratory that is not accredited for this analysis
T	This analysis has been subcontracted to an unaccredited laboratory
I/S	Insufficient Sample
U/S	Unsuitable Sample
N/E	not evaluated
<	"less than"
>	"greater than"

Comments or interpretations are beyond the scope of UKAS accreditation

The results relate only to the items tested

Uncertainty of measurement for the determinands tested are available upon request

None of the results in this report have been recovery corrected

All results are expressed on a dry weight basis

The following tests were analysed on samples as received and the results subsequently corrected to a dry weight basis TPH, BTEX, VOCs, SVOCs, PCBs, Phenols

For all other tests the samples were dried at < 37°C prior to analysis.

All Asbestos testing is performed at our Coventry laboratory.

Issue numbers are sequential starting with 1 all subsequent reports are incremented by 1

Consent of copyright owner required for any other use.

---

### **Sample Deviation Codes**

- A - Date of sampling not supplied
- B - Sample age exceeds stability time (sampling to extraction)
- C - Sample not received in appropriate containers
- D - Broken Container

---

### **Sample Retention and Disposal**

All soil samples will be retained for a period of 45 days from the date of receipt

All water samples will be retained for 14 days from the date of receipt

Charges may apply to extended sample storage

If you require extended retention of samples, please email your requirements to:

[customerservices@chemtest.co.uk](mailto:customerservices@chemtest.co.uk)

## Report Information

### **Key**

---

U	UKAS accredited
M	MCERTS and UKAS accredited
N	Unaccredited
S	This analysis has been subcontracted to a UKAS accredited laboratory that is accredited for this analysis
SN	This analysis has been subcontracted to a UKAS accredited laboratory that is not accredited for this analysis
T	This analysis has been subcontracted to an unaccredited laboratory
I/S	Insufficient Sample
U/S	Unsuitable Sample
N/E	not evaluated
<	"less than"
>	"greater than"

Comments or interpretations are beyond the scope of UKAS accreditation

The results relate only to the items tested

Uncertainty of measurement for the determinands tested are available upon request

None of the results in this report have been recovery corrected

All results are expressed on a dry weight basis

The following tests were analysed on samples as received and the results subsequently corrected to a dry weight basis TPH, BTEX, VOCs, SVOCs, PCBs, Phenols

For all other tests the samples were dried at < 37°C prior to analysis.

All Asbestos testing is performed at our Coventry laboratory.

Issue numbers are sequential starting with 1 all subsequent reports are incremented by 1

Confidential - For inspection purposes only.  
Copyright owner reserves all rights.

---

### **Sample Deviation Codes**

- A - Date of sampling not supplied
- B - Sample age exceeds stability time (sampling to extraction)
- C - Sample not received in appropriate containers
- D - Broken Container

---

### **Sample Retention and Disposal**

All soil samples will be retained for a period of 45 days from the date of receipt

All water samples will be retained for 14 days from the date of receipt

Charges may apply to extended sample storage

If you require extended retention of samples, please email your requirements to:
