1 EMISSIONS TO GROUND

1.1 ATTACHMENT-7-6-2 EMISSIONS TO GROUND CONTROL

The proposed operation of the site will involve discharge of surface water and groundwater discharges to the Shallon stream. The monitoring of the surface water discharge for appropriate parameters, as described in Section 7.2 of this waste licence application, will indicate potential contamination from fuel/oil spillage from traffic or potential contamination from contaminated soil and stone inputs.

Appropriate mitigation control measures for minimising pollution on the environment are also referenced within the EIAR.

It is through adoption of rigorous waste acceptance procedures as outlined in the EIAR (Section 5.7.2 of the EIAR) the control measures as outlined and water monitoring in accordance with the regulations that the proposed arrangements are adequate will meet the requirements of Council Directive 2006/118/EC on the protection of groundwater against pollution and deterioration and Council Directive 80/68/EEC on the protection of groundwater against pollution by certain dangerous substances.
