

In the case of an installation boundary increase for an Industrial Emission Licenced activity, you are required to provide the reason that you consider a Baseline Report is not required.

Louth County consider that a baseline report is not required as the parcel of land in question has always been included with the existing boundary for the purposes of monitoring groundwater and landfill gas, since the licence was issued for the site. The Council are regularising the site boundary having purchased this area of land of a third party. In addition the Council have submitted specified engineering works to the EPA for their approval for the capping of this area of land.
