

4.3 Waste Acceptance Procedure

There is no proposed development and no licensable activity will be taking place at the site.

There will be no activity or processing of material. The material previously imported to the site is inert. It is proposed that this existing material will remain *in situ*, with no further movement of material or importation of additional waste material to the site.

As there will be no activity taking place or staff present at the subject site, no associated operational waste, such as canteen, office, and other waste streams will be generated.

Therefore, as no activity will be taking place and no waste will be accepted onsite, no Waste Acceptance Procedures are required or will be employed, and no procedure has been developed.

For inspection purposes only.
