# 9 Environmental Management Techniques 1

#### 9.1. Accident Prevention Measures

#### Measures to prevent accidental emissions and liabilities

Incidents and accidents are unplanned events. Emissions from incidents and (major) accidents usually occur within a relatively short time frame but with greater intensity than under normal operating conditions. Incidents such as fire or fuel spillages can result in liabilities such as contaminated soil and groundwater. Proactive risk management reduces the potential for an incident.

Abnormal operating conditions must be managed without endangering human health and harming the environment, and in particular without risk to water, air, soil, plants or animals, without causing a nuisance through noise or odours, and without adversely affecting the countryside or places of special interest.

The applicant must firstly undertake a risk assessment in accordance with EPA guidance on assessing and costing environmental liabilities. Having identified the key risks, the applicant should populate the following table with the measures to be taken to treat the key risks, e.g., bunding, integrity testing, fire prevention, etc.

The range of measures is dependent on the complexity of the site. Pollution prevention measures may, inter alia, include the following information:

- Conclusions on BAT set out in the EU Reference document on BAT on emissions from storage such as a safety management system; corrosion prevention measures on tanks, etc.
- Details of storage of all raw materials, products and wastes such as segregation, labelling, designation and impervious surface;
- Details of spill or emergency containment measures and structures such as bunds, high level alarms, absorbent materials;
- Details of fire detection and fire-water retention facilities in the event of emergencies or other measures to contain fire-water;
- Details of transport of material within the site, solid, liquid or sludge transported by pipe, vehicle or conveyor; etc.,
- The Agency has published a guidance document on Fire-Water Retention Facilities and on the Storage and transfer of materials.

This part of the form collects information on environmental management at the installation/ facility. It seeks to understand the maturity of the management system in terms of knowledge of abnormal operating conditions, prevention and early detection measures and emergency response procedures. The level of detail required in this part of form relates to the environmental risk posed.

Describe in the table below existing and/or proposed measures, including emergency procedures, to minimise the impact on the environment of an accidental emission or spillage. (This table should include the measures to be taken under abnormal operating conditions, including start-up, shutdown, leaks, malfunctions, breakdowns and momentary stoppages that will demonstrate that any emission arising will not cause significant environmental pollution)<sup>2</sup>.

	and t					
	Cotte					

<sup>\*</sup>add rows to the table as necessary

<sup>&</sup>lt;sup>2</sup> Information relating to the integrity, impermeability and recent testing or pipes, tanks and bund areas should be included.

Outline what provisions have been made to ensure an adequate response to emergency situations outside of normal working hours, i.e., during night-time, weekends and holiday periods (attach additional pages to this document if required):

All essential systems (Feeding, Ventilation, Water, temperature etc.) will be linked to mobile phone alarm with at least 2 pre-programmed contact numbers to be contacted. Applicant lives in close proximity to the site and farms adjacent to same.

#### **Soil Monitoring Points**

Periodic monitoring of soil and groundwater is required having regard to the possibility of soil and groundwater contamination of the site3.

Complete the table below with details of soil monitoring locations and in particular where a baseline report has been/is required in accordance with Section 86B of the EPA Act 1992 as amended.

No

#### **Costed Environmental Liabilities Risk Assessment (ELRA)**

Indicate if the activity, through pre-application meeting with the Agency or other means, is required to submit a costed ELRA<sup>8</sup> as part of the licence, or licence review application.

Total application.	
Costed Environmental Liabilities Risk Assessment	ent (ELRA) required to be submitted? (Yes/No): No
• •	les Risk Assessment (ELRA), prepared in accordance with the <i>Environmental Protection Agency's Guidance on</i> (2014) (select Document Type: ' <u>ELRA'</u> in the application form).
Costed <b>ELRA</b> document filename:	. Nee.
Indicate your preferred form of financial provis Financial Provision (2015), e.g., Environmental	sion instrument to meet ELRA costings have regard to the Environmental Protection Agency's Guidance on Liability Insurance:

Upload a financial provision proposal have rega	rd to the Environmental Protection Agency's Guidance on Financial Provision (2015) (where required at application
/review application stage) (select Document Ty	pe: 'Financial Provision Proposal' in the application form)
Financial Provision Proposal filename:	NA for Intensive Agriculture
	Consent

- There is an explicit requirement in EU and Irish law for financial provision for certain activities. The following categories of activities have an ELRA/CRAMP/FP requirement:
  - 1. Landfills (excl. closed L.A. Landfills closed before 16<sup>th</sup> July 2009)
  - 2. CAT A Extractive Waste Facilities
  - 3. High Risk Contaminated Land Facilities
  - 4. All Haz-Waste Transfer Stations
  - 5. Non-Haz WTS (Accepting >50,000 tons/annum)
  - 6. Incineration (incl. co-incineration of hazardous waste)
  - 7. Upper & Lower Tier Seveso Sites
  - 8. Exceptional circumstances associated with the site, e.g., significant ground/groundwater contamination.

Regard should be had by applicants to relevant Agency guidance on these matters.

#### Closure, Restoration and Aftercare Management Plan (CRAMP)

A restoration/aftercare period will be required where there are on-going environmental liabilities following closure. Applicants are required to describe the existing or proposed measures to avoid any risk of environmental pollution and to return the site to a satisfactory state or the state established in the baseline report where applicable, after the activity or part of the activity ceases operation.

A key measure is the preparation of a Closure, Restoration and Aftercare Management Plan (CRAMP) by the operator, for certain activities<sup>9</sup>. Notwithstanding the requirements of the EC Environmental Objectives (Groundwater) Regulations 2010, S.I. No. 9 of 2010, the closure and restoration/ aftercare target is the site condition at the time of the original application or the baseline report. The applicant shall have regard to the Environmental Protection Agency's Guidance on Assessing and Costing Environmental Liabilities (2014) in the preparation of the CRAMP.

Upload a CRAMP, where applicable (so	elect Document Type: ' <u>Site Closure</u> ' in the application form).
CRAMP filename:	and any of
Costed CRAMP	an Purposes of for

CRAMP required to be submitted at	application/licence review application stage? (Yes/No): No
	cotset.

The following categories of activities have an ELRA/CRAMP/FP requirement:

- 1. Landfills (excl. closed L.A. Landfills closed before 16<sup>th</sup> July 2009)
- 2. CAT A Extractive Waste Facilities
- 3. High Risk Contaminated Land Facilities
- 4. All Haz-Waste Transfer Stations
- 5. Non-Haz WTS (Accepting >50,000 tons/annum)
- 6. Incineration (incl. co-incineration of hazardous waste)
- 7. Upper & Lower Tier Seveso Sites
- 8. Exceptional circumstances associated with the site e.g. significant ground/groundwater contamination.

Page 11 of 17

There is an explicit requirement in EU and Irish law for financial provision for certain activities. The applicant shall have regard to the Environmental Protection Agency's Guidance in determining CRAMP requirements and on Financial Provision (2015) in making financial provision to cover any liabilities.

Indicate your preferred form of financial provision instrument to meet CRAMP costings (where appropriate), e.g., Secured fund, On-demand performance Bond, Parent Company Guarantee, Charge on Property (have regard to the Environmental Protection Agency's Guidance on Financial Provision (2015) on the Agency's website):

#### **Cessation of Activity**

Where a CRAMP <u>is not</u> required, describe the measures to be taken on and following the permanent cessation of the activity or part of the activity to avoid any risk of environmental pollution and to return the site of the activity to a satisfactory state. (Input your response in the text box below or attach the information in to this attachment).

If the enterprise had to cease operation, all feeding, animal production, poultry manure production and waste production would cease also. At such time there would be normal inputs still in stock (e.g. feed in bins and medicines, etc.) and there would be stock in houses, manure in houses and also some of the wastes (dead animals, medicine containers) in their respective containers. All of those materials would then be disposed of or distributed in the same way as was normal during the normal operation of the enterprise. Saleable stock would be sold to the usual outlet. All remaining feed and medicines would be returned/sold back to the respective suppliers. The buildings, once empty of stock would be washed clean and all manure/dirty wash water would be spread on farmland, there would be no special or adverse impact on the environment.

In the unlikely event of closure being the result of a Class A disease incident, any non-saleable stock would be humanely put down and consigned either for rendering (as currently done for the dead animal tissues) or for incineration. In such a situation, all of that would be under the control of the veterinary Division of the Department of Agriculture.

#### **Emergency Response Procedure**

Do you have an emergency response procedure (ERP)? (Yes/No)

# 9.4. Hours of Operation

Provide details of the hours of operation for the installation (hours and days per week, etc.), including:

(a) Proposed hours of operation.

While production on the site is to be continuous, the presence of operative staff and deliveries / collections will normally be between 06.00 and 20.00 hours. Ventilation and feeding operations to operate continuously on site.

(b) Proposed hours of construction and development works and timeframes.

Mon - Fri 07:00 : 20:00 Sat 08:00:13:00

Sun

(c) For waste activities, the proposed hours of waste acceptance.

N/A

(d) Any other relevant hours of operation expected (e.g., waste handling, etc.).

#### 9.5. Review of a Licence

Where the Office of Environmental Enforcement (OEE) has agreed any variations or adjustments to the conditions or schedules of the existing licence, the licensee must provide details of these agreed variations and adjustments to the existing licence conditions in the table that follows.

An updated, scaled drawing of the site layout (no larger than A3) providing visual information on such adjustments or variations where appropriate should be uploaded in the **site tab** – 'site plan(s)' upload.

In the case of once-off assessments/reports required under conditions/schedules of the existing licence the licensee must provide details of those assessments/reports that have been completed and agreed with the OEE or as otherwise agreed, in the table below.
