Objection Re: Irish Cement application - P0029-5

Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

# Objection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

he kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

# **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

## Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

## Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

## Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

#### <sup>3</sup>Objection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

#### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

#### **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

#### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

# Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

#### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

**Subject:** Objection Re: Irish Cement application - P0029-5

### Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

# bjection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

**Objection 8** 

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

## Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

## **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

## Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

## Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

#### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Objection Re: Irish Cement application - P0029-5

Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

# Diection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

## Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

## Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

# Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

# Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aguifer as a consequence of any fire.

# Objection 8

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

## Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

# **Objection 10**

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

#### **Objection 11**

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Objection Re: Irish Cement application - P0029-5

## Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

# bjection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

## Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### ♠ bjection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

## **Objection 5**

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

# **Objection 8**

#### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

## **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

## Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Objection Re: Irish Cement application - P0029-5

#### Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

# bjection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

## Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

### Objection 8

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

### **Objection 10**

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

#### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Objection Re: Irish Cement application - P0029-5

## Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

# bjection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

whe kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

## Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

Objection Re: Irish Cement application - P0029-5

#### Licensing EPA

Licencing | Environmental Protection Agency

### To whom it may concern,

I have no confidence at all in Irish Cement monitoring emissions, and I am not at all sure that the EPA would do any better. They are also being allowed in a very open spec to burn anything they like. This a very residential and school area and would definitely have an effect on the health of all. The prevailing wind blows everything into the city. It is morally wrong to allow this to happen. Ron Ireland.

wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn yres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

### Objection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

Objection Re: Irish Cement application - P0029-5

#### Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

# bjection 1:

I live nearby in the Raheen area of the city and continue to be effected by fallouts from the cement factory stack.

### Objection 2:

That local public representatives voted and allowed this to go ahead.

### Objection 3

I'm concerned by the lack of public consultation on these shanges which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

#### Objection 4

I'm concerned that readily available options including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

# Objection 5

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

## Objection 6

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

## Objection 7

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

# **Objection 8**

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

### Objection 9

I'm concerned that the storage of 1,000's of tonnes of bio-solids and industrial solvents risks leaching of contaminant into the Gouldavoher aquifer, polluting the ground-water and the Shannon Estuary.

### Objection 10

That the increased use of diesel driven articulated vehicles (already proven to cause significantly increased cancer risks, to children especially, living near these roads) in the transportation of this waste on the Foynes/Limerick road will lead to a widespread increase in health issues in these areas.

## Objection 8

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

## Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

### **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

### Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Objection Re: Irish Cement application - P0029-5

Licensing EPA
Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

m concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

Also, the kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

RE: Irish cement factory, raheen, limerick

----Original Message----

From:

Sent: 10 March 2017 02:13 To: Wexford Receptionist

Subject: Irish cement factory, raheen, limerick

[OPTIONAL] YOUR NAME: Peter Timoney

MESSAGE or QUERY.

I wish to lodge an objection to the license being applied for at this site. As a resident living within 2 miles, a parent, a husband, a son and a working taxpayer, i feel this decision will affect my quality of life dramatically. I will live in fear that the output from this facility being allowed burn such materials as described will have adverse effects on me and my family. I beg that this site note be allowed a license to contaminate our community for profit

Objection Re: Irish Cement application - P0029-5

Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

## bjection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

### Objection 4

he kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. Objection Re: Irish Cement application - P0029-5

Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points: 1). Discharge of toxic material into the atmosphere upwind of Limerick City. 2).C.R.H. of which I am a shareholder is a substantial company which exists not just for the benefit of its hareholders and management but to produce ethical products which can benefit mankind and his descendents with causing any irreversible damage to the environment and the species that we humans share it with.Please note the Article published in Irish Management Institute website on 7/10/2016 by Dr. Ros O'Shea ex Director on Corporate Governance at C.R.H.

### Objection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

### Objection 3

Jue to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

### Objection 7

I'm concerned that the storage of 1,000's of tonnes of bio-solids and industrial solvents risks leaching of contaminant into the Gouldavoher aquifer, polluting the ground-water and the Shannon Estuary.

### **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

### Objection 8

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

### Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Concern over proposed incinerator for Irish Cement Factory in Mungret, Limerick

From: Liam O'Mahoney Sent: 09 May 2017 13:32 To: Wexford Receptionist

Cc:

Subject: Concern over proposed incinerator for Irish Cement Factory in Mungret , Limerick

Dear Sir/Madam,

I am writing to you as the secretary to the interim Board of Management of Mungret Community College, a new Post-Primary School which will open its doors for the academic year 2017/18. The Board is concerned that the proposed incinerator for the Irish Cement Factory in Mungret may have an influence on the air quality in the area.

We intend to encourage our students to be physically active, eat healthy, respect the environment and their own and others well-being. We would appreciate it if you could keep us informed on any further developments around this proposed project as the health and safety of our students is our priority.

Kind regards,
Liam O Mahoney,
Principal/Secretary to the Board of Management,
Mungret Community College,
C/O LCETB,

Reg. Herberger Legisland Control of Management,
Reg. Herberg Legisland Control of Management,
Reg

Objection Re: Irish Cement application - P0029-5

Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

### Objection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is weefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

### Objection 2

Objection 2
I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health of ks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

he kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

### **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

### **Objection 10**

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

#### Objection 8

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

#### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

#### Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

#### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Objection Re: Irish Cement application - P0029-5

#### Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

# bjection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is weefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

#### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### )bjection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

#### Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

ne kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

#### **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

#### Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

#### Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

#### Objection 11

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

## Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

## Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

he kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

## Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

#### Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aquifer as a consequence of any fire.

## **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

## Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

## Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

## **Objection 11**

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.

Objection Re: Irish Cement application - P0029-5

## Licensing EPA

Licencing | Environmental Protection Agency

To whom it may concern,

I wish to object to the application made by Irish Cement Limerick - reference number P0029-5 for a license to burn tyres at their facility in Castlemungret, Co. Limerick.

I base my objections on the following points:

## bjection 1

I'm concerned by the lack of public consultation on these changes which has severely eroded public trust in this application. Irish Cement claim to have distributed leaflets and held a public meeting, however, by their own admission they only distributed 500 leaflets about this meeting which is woefully inadequate when one considers that there are 6,900 households in the Ballycummin electoral area alone.

## Objection 2

I'm concerned that readily available options, including available natural gas are not being used to reduce Irish Cement's carbon emissions despite the reduced health risks and the recent construction of a new gas feeder to Castlmungret.

#### Objection 3

Due to budget cut-backs the EPA have shut down their Limerick Air Quality measuring facility. I'm concerned that the EPA will be unable to monitor the output from the incinerator. With no independent monitoring of the emissions it will be up to Irish Cement to monitor themselves.

#### Objection 4

The kiln in the Irish Cement factory is old and was never designed to burn tyres or waste materials. Residents in the Raheen and Dooradoyle area are already familiar with the dust blowouts that occur when the plant malfunctions. I'm concerned by the potential emission of highly toxic carcinogenic dioxins should a malfunction occur while hazardous waste is being burned. I'm concerned that Irish Cement to not have the control systems, safety fail-safes and expert staff to maintain the consistently high temperatures and manage an incinerator of this scale without increased risk of contaminating nearby farms and residential areas especially in light of their poor track record of regular dust blowouts.

#### Objection 5

I'm concerned that Industrial Incineration should be introduced just three miles from the city centre, upwind of the prevailing winds and less than a mile from Limerick City and County's newest high-amenity area, proposed primary and secondary schools, the new Mungret public park and a large area zoned for new residential development.

## Objection 6

I'm concerned that the storage of 1,000's of tonnes of tyres represents a fire risk not to mention the risk of contamination of the Gouldavoher aguifer as a consequence of any fire.

## **Objection 8**

I'm concerned by the possibility of poor controls in the importation and selection of industrial waste for incineration. How does Irish Cement plan to control the burning of dangerous industrial substances including Halogenated materials?

## Objection 9

I'm concerned by the possibility of noxious odours from the storage and incineration of solvents, sludge and industrial solvents especially in light of the EPA's inability to measure and monitor these risks.

## Objection 10

I'm concerned, given the high levels of beef and dairy production close to the plant of the risks of dioxin poisoning to our food chain as well as the reputational risk to our local agriculture.

#### **Objection 11**

I'm concerned that Industrial Incineration will become a large revenue stream to Irish Cement resulting in ever increasing importation of tyres and industrial waste. I'm particularly concerned by the risk of insects, viruses and unknown contaminants entering the country borne by tyres, industrial plastics and bio-solids.
