### Special Registration Maps

Special Registration Maps can be ordered and printed at a selection of standard metric scales up to and including 1/500 scale.

Hard copy ITM maps which have been enlarged from the original OSi published scale for the area can not be expected to give a higher degree of accuracy than that of the original scale.

1/5,000 and 1/10,000 scale maps may not be acceptable for registration purposes in hard copy form unless the new property is entirely bounded by OSi topographic detail.

*Please contact Ordnance Survey Ireland (OSi) for information regarding the scale and accuracy of their maps.*

Official Property Registration Map  
This map should be read in conjunction with the folio.

Registry maps are based on OSI topographic mapping. Where registry maps are printed at a scale that is larger than the OSI published scale, accuracy is limited to that of the original OSI map scale.

For details of the terms of use and limitations as to scale, accuracy and other conditions relating to Land Registry maps, see [www.pral.ie](http://www.pral.ie).

A full list of burdens and their symbology can be found at: [www.landdirect.ie](http://www.landdirect.ie)

The registry operates a non-conclusive boundary system. The Registry Map identifies properties not boundaries meaning neither the description of land in a register nor its identification by reference to a registry map is conclusive as to the boundaries or extent. (see Section 85 of the Registration of Title Act, 1964). As inserted by Section 62 of the Registration of Deed and Title Act 2006.
