

In accordance with Schedule A1 and A2 of the Licence, the installation can accept commercial, industrial and household waste, non-hazardous sludge and food waste and leachate from landfills. The annual waste intake of 65,000 tonnes was limited to 20,000 tonnes of commercial, industrial and household; 40,000 tonnes of sludge and food waste; and 5,000 tonnes of leachate.

Eras Eco stopped accepting and processing mixed dry recyclable waste in 2013 and in July 2018 stopped accepting sludge for thermal drying and does not intend to restart either activity. The amendments to Schedule A1 and A2 will allow Eras Eco to accept 65,000 tonnes of organic waste annually for treatment in the anaerobic digestion plant.
