

PERMADOME® PVC Tank and Silo Covers provide an excellent odour control barrier and are a versatile roofing solution for a wide range of municipal, industrial, and agricultural applications.

PERMADOME® PVC Tank and Silo Covers

Permastore's Polyvinyl Chloride (PVC) cover solution utilises a PVC outer membrane skin that is tensioned over a modular corrosion resistant aluminium frame system or a hardwood centre pole that is bolted to the floor of the tank.

PERMADOME® PVC Covers use an inner polyester weave that is coated on both sides with a layer of PVC which can then have welded reinforcing bands added. These covers are a versatile roofing solution suitable for a wide range of applications including drinking water, sewage treatment, industrial effluent, and agricultural slurry.

Permastore PVC covers provide an excellent odour control barrier as they can be installed over a clear span dome structure without any supporting central posts, they can offer a cost-effective solution for a wide range of applications especially over process tanks.
