

Additional Information Regarding Application

- 1) When completing the application online we filled in the pre-questionnaire and when the system did its recommended method to proceed it advised us to go for the 'Licence Amendment Option' on the online portal which is what we have proceeded to do however the screening report received by email indicates a full licence review may be required so we have a little confusion about the way to proceed but we have proceeded as per the online portal recommendation at this stage.
- 2) This amendment has been discussed without local inspectors in Castlebar and they have also advised a licence amendment as opposed to review was the way to proceed and they can be contacted for clarification around the details of this project.
- 3) In summary terms the building on site was constructed over 10 years ago originally with the idea of getting in permitted but we have now decided to try and increase the boundary and relocate an existing process from its current position to this shed. It's an existing activity that will not affect incoming tonnage, emissions or monitoring points on site.
- 4) Our Consulting Engineer is Tobins Consulting Engineers and contact name is Brendan Rudden 087-6989364 or Brendan.Rudden@tobin.ie
