

WATER, ENERGY AND BUSINESS SUPPORT PROGRAMME

TO:	Micheál Lehane, Director
FROM:	Niamh Connolly, Katelyn Grant and Rebecca McGovern, Inspectors, Office of Environmental Sustainability
DATE:	27 th August 2024
RE:	Agency initiated Technical Amendment (TA) to Industrial Emissions (IE) licence Register No. W0267-01, held by Hi-Volt Ireland Limited, for an installation located at Ballyduff (Townland Shanballyduff and Piercetown), Thurles, County Tipperary, to comply with the Commission Implementing Decision establishing best available techniques (BAT) conclusions for Waste Treatment (CID 2018/1147).

1. Background

The Agency, in accordance with Regulation 96(1)(c) of the Environmental Protection Agency Act 1992 as amended, proposes to amend the IE licence Register No. W0267-01, granted to Hi-Volt Ireland Limited, Ballyduff (Townland Shanballyduff and Piercetown), Thurles, County Tipperary.

The amendment relates to updating the licence conditions and emission limit values to ensure that the operation of the installation is in line with the Commission Implementing Decision establishing best available techniques (BAT) conclusions for Waste Treatment (CID 2018/1147) (WT CID).

Article 14(3) of the Industrial Emissions Directive (IED) makes BAT conclusions the mandatory reference for setting permit conditions and Article 21 of the IED requires that licence Conditions and/or Schedules be **'reconsidered and, if necessary, updated'** within four years of publication of the CID relevant to the main activity. The installation must comply with those conditions within four years following the publication of the relevant CID.

2. Engagement with the Waste Treatment sector

Regulation 96(2) of the Environmental Protection Agency Act 1992 as amended allows the Agency to consult with the licensee before amending a licence.

The Agency engaged with the Waste Treatment sector, including the licensees, O'Callaghan Moran & Associates, JFK Environmental Limited, Enviroguide Consulting, RPS Group, and NRG. A workshop was held on the 21 November 2023, which was attended by licensees and stakeholders including O'Callaghan Moran & Associates, Enviroguide Consulting, RPS Group, and NRG. The workshop covered the process for examining the licences, and the requirements for filling in the WT BAT conclusion CID assessment document. A cover letter and the WT BAT conclusion CID assessment document were emailed to the licensees on the 22 November 2023, following the workshop.

On 11 April 2024, Hi-Volt Ireland Limited, W0267-01 was advised that the EPA has decided to amend its licence under Regulation 96(1)(c) of the Environmental Protection Agency Act 1992 as amended, to incorporate the requirements of the Commission Implementing Decision (CID) on Best Available Techniques (BAT) conclusions for Waste Treatment (CID 2018/1147). The public were invited to participate via newspaper notice, which was published on 11 April 2024, however, no submissions were received. All correspondence was made available on the EPA website.

3. Changes required through Technical Amendment

The Agency has reconsidered the existing licence for sub-sector: Temporary storage of hazardous waste, (other than waste referred to in paragraph 11.5) pending any of the activities referred to in paragraph 11.2, 11.3, 11.5 or 11.7 with a total capacity exceeding 50 tonnes, other than temporary storage, pending collection, on the site where the waste is generated (Class 11.6), which indicates that the WT CID requirements need to be incorporated into the existing licence (W0267-01, Hi-Volt Ireland Limited).

The overall requirements are to ensure that emissions do not exceed those set out in the WT CID, the operation of the installation is in line with the latest developments in best available techniques (BAT) and to achieve a high level of protection of the environment. The specific changes to the licence, to fulfil the requirements, are set out in Appendices 1 and 2 of this report.

Section 96(1) of the EPA Act:

Section 96(1) of the EPA Act states that

“The Agency may amend a licence or revised licence for the purposes of -

- (a) correcting any clerical error therein,
- (b) facilitating the doing of anything pursuant to a condition attached to the licence where the doing of that thing may reasonably be regarded as having been contemplated by the terms of the condition or the terms of the licence taken as a whole but which was not expressly provided for in the condition, or
- (c) otherwise facilitating the operation of the licence and the making of the amendment does not result in the relevant requirements of section 83(5) ceasing to be satisfied”.

It is considered that the proposed amendment may be accommodated under Section 96(1)(c). To amend the licence under this criterion, two parts need to be satisfied, Part (i) otherwise facilitating the operation of the licence and Part (ii) does not result in the relevant requirements of Section 83(5) ceasing to be satisfied. The changes proposed will impose the same or stricter limits and control on the licensee to ensure compliance with the WT CID and are considered as otherwise facilitating the operation of the licences and will not result in the relevant requirements of Section 83(5) ceasing to be satisfied.

Based on the above assessment, it is recommended that the changes to the licence be accommodated by Technical Amendment. The proposed amendments will satisfy the criteria under Section 96(1)(c) of the EPA Act 1992 as amended allowing the Agency to amend a licence or revised licence.

The Recommended Amendment (RA) provides for the incorporation of the requirements of the Commission Implementing Decision (CID) on Best Available Techniques (BAT) conclusions for Waste Treatment (CID 2018/1147). The specific changes relate to the conditions and schedules of the licence, as specified in Appendix 1 of this report. Appendix 2 outlines the changes required through technical amendment for the installation.

4. Appropriate Assessment

Appendix 3 lists the European Sites assessed, their associated qualifying interests and conservation objectives for the installation.

A screening for Appropriate Assessment was undertaken to assess, in view of best scientific knowledge and the conservation objectives of the site, if the activity, individually or in combination with other plans or projects is likely to have a significant effect on any European Site.

The activity is not directly connected with or necessary to the management of any European Site and the Agency considered, for the reasons set out below, that it can be excluded, on the basis of objective information, that the activity, individually or in combination with other plans or projects, will have a significant effect on any European Site and accordingly determined that an Appropriate Assessment of the activity was not required.

The reasons for this determination are as follows:

- the installation is not located within any European site;
- this amendment is for the purposes of updating the licence to ensure compliance with the Commission Implementing Decision for Waste Treatment (CID 2018/1147). This amendment updates the licence conditions and maintains or tightens the emission limit values to ensure the operation of the installation is in line with the latest developments in best available techniques (BAT) and to achieve a high level of protection of the environment; and
- the proposed changes do not substantially change the nature or extent of the operations at the installation.

Recommendation

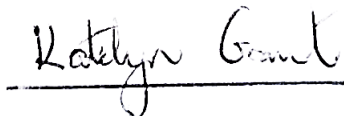

This memo recommends that the requested changes can be accommodated by a Technical Amendment of Licence W0267-01 (held by Hi-Volt Ireland Limited), in accordance with section 96(1)(c) of the EPA Act 1992 as amended.

I recommend that the licence amendment be approved as set out in the attached recommended Technical Amendment. The making of the amendment will not result in the relevant requirements of section 83(5) of the EPA Act 1992 as amended, ceasing to be satisfied.

Signed,

Niamh Connolly
