

#### **Attachment-4-5-4-Waste Authorisation**

The Drehid Waste Management Facility (Drehid WMF) is authorised to engage in certain waste disposal and recovery activities, which require a waste licence. The primary waste-related activities at the Drehid WMF include the commercial acceptance of waste materials from external waste operators. These materials are designated for disposal in the existing MSW Landfill and proposed additional landfill capacity, the existing Composting Facility, the proposed MSW Processing & Composting Facility and the proposed screening and recovery facility for Soils, Stones and Construction & Demolition (C&D) rubble.

In addition to handling waste from external sources, Drehid WMF manages certain quantities of waste generated on-site. This includes waste oil generated from servicing the 4 gas engines and site machinery and leachate from the landfill infrastructure which will be transported offsite to approved Wastewater Treatment Plants (WWTP).

The output produced by the Compost Facility is sent to the landfill on site.
